DEINKRUSTOL - BIO

Preparation for water conditioning

CHARACERISTICS

DEINKRUSTOL – BIO is preparation of new modern generation destined for central heating, solar heating and devices, where water is basic medium for heating and cooling.

CHEMICAL COMPOSITION

DEINKRUSTOL – BIO is suitable lotion of organic stabilizer water hardness organosilicon inhibitors of corrosion and dispersants.

PROPERTIES:

DEINKRUSTOL – BIO

- preparation removes off the water aggressive carbon dioxide, organosilicon inhibitor of corrosion averting to process of corrosion and stabilizer prevents to formation deposits inside of the iron pipes;
- avertings from sediments, deposits, sea-grass and germs
- uses for prevention of creation water blocks, deposits and reduction corrosive effect of pipes;
- avertings sintering of isolators and valves and creation of mucilage inside pipes;
- is suitable for all types iron and nonmetallic wirings, inclusive of copper and aluminium;
- is miscibles with water in any rate to pure solution;
- adds out of the water directly, without further processing
- is noflammable and insusceptible to directives of ADR in transport and store.
